Education

National Institute of Technology Calicut

Master of Technology (Computer Science and Engineering - Information Security) - CGPA: 7.58 / 10

Kozhikode, Kerala, India

2024 - 2026

Government College of Engineering

Bachelor of Engineering - CGPA: 8.66 / 10

Bargur, Tamil Nadu, India

2020 - 2024

Profile

Software Developer with 10 months of production experience at SAP Labs, skilled in building and optimizing scalable RESTful APIs and web applications using React.js, Node.js, FastAPI, and MongoDB. Exposure with Docker, Kubernetes, and CI/CD pipelines in cloud-native environments, with working experience in Generative AI, Agentic AI and LLM-based systems.

Experiences

- **Software Developer Intern : SAP Labs, Bengaluru** (August 2025 - June 2026)
 - Developed and maintained backend services for a Retrieval-Augmented Generation (RAG) platform supporting document grounding and knowledge retrieval applications; built and optimized scalable RESTful APIs using FastAPI for efficient document ingestion, retrieval workflows, and seamless integration with LLM-powered services.
 - Implemented backend business logic and workflow optimizations to improve system reliability and reduce processing latency across critical service endpoints; collaborated with cross-functional teams in Agile environments to troubleshoot production issues, enhance application performance, and deliver production-ready features.
 - Redesigned a critical data deletion workflow by optimizing backend processing logic, reducing execution time from over 300 seconds to under 4 seconds and achieving a 98% performance improvement in production.
 - Contributed to the development of microservices-based architectures, focusing on code maintainability, scalability, high availability, and cloud-native application design.
 - Utilized Docker-based development environments and participated in CI/CD workflows to streamline deployments and support efficient software delivery.

Skills

- **Programming Languages:** Java, C, Python
- **Frontend:** HTML5, CSS3, Tailwind CSS, JavaScript, React.js
- **Backend:** Node.js, Express.js, FastAPI, Microservices Architecture, REST API Design
- **Databases:** MongoDB, MySQL
- **DevOps:** Git, Docker, CI/CD Pipeline
- **Core:** OOP, Data Structures, System Design Fundamentals
- **AI/ML:** LLMs, Langraph, LangChain, Generative AI, RAG, Prompt Engineering, Agentic AI

Projects

- **Agentic AI Chatbot with Retrieval-Augmented Generation (RAG)** | *Python, LangGraph, LangChain, Streamlit, Groq API, FAISS DB, SQLite*
Developed an autonomous Agentic AI chatbot using LangGraph with persistent memory, and dynamic tool calling. Integrated a Retrieval-Augmented Generation (RAG) pipeline using vector embeddings and semantic search to provide context-aware responses from custom knowledge bases. Implemented multi-session conversation management with checkpoint-based memory, external API integration, and a responsive Streamlit interface supporting streaming responses and chat history.
- **Resume Building Platform with AI Assistance** | *React.js, Tailwind CSS, Express.js, MongoDB, JWT, Google Gemini API*
Developed a full-stack web application that enables users to create resumes using predefined templates with AI-assisted content enhancement powered by the Google Gemini API. Implemented JWT-based authentication and authorization for secure user access, built RESTful APIs using Express.js, and integrated MongoDB for dynamic resume generation and data management.
- **TextBook GPT** | *Python, Gradio, LangChain, ChromaDB, Web Search*
Built an AI-powered application that answers textbook-related questions and supports academic note-taking. Integrated Google Search with LLM-based retrieval and ChromaDB for contextual and accurate responses. Developed using Python and Gradio UI, focusing on improving knowledge retrieval and learning assistance.
